Oncology Supply

Nucleus Equipment Details

Full-Size Station (UAC & AUX) Details

- Integrated touchscreen, label printer, and receipt printer for maximum space utilization. Additional Auxiliary units available.
- Space is available for a dorm size refrigerator to fit inside the Nucleus cabinet.
- Maximum Dimensions for Refrigerator Inside Nucleus: 21.75" W x 25" D x 35" H
- Electronic Refrigerator Lock (ERL) available for customers utilizing a refrigerator that cannot be placed inside the Nucleus cabinet.

Virtual Printing Module (VPM) Details

- Integrated receipt and label printers.
- Ability to use external refrigerator locks (full-size VPM only).
- External touchscreen and keyboard
- Two size offerings

Desktop Details

- Ability to store any inventory in virtual doors.
- External touchscreen and keyboard

UAC Single Unit

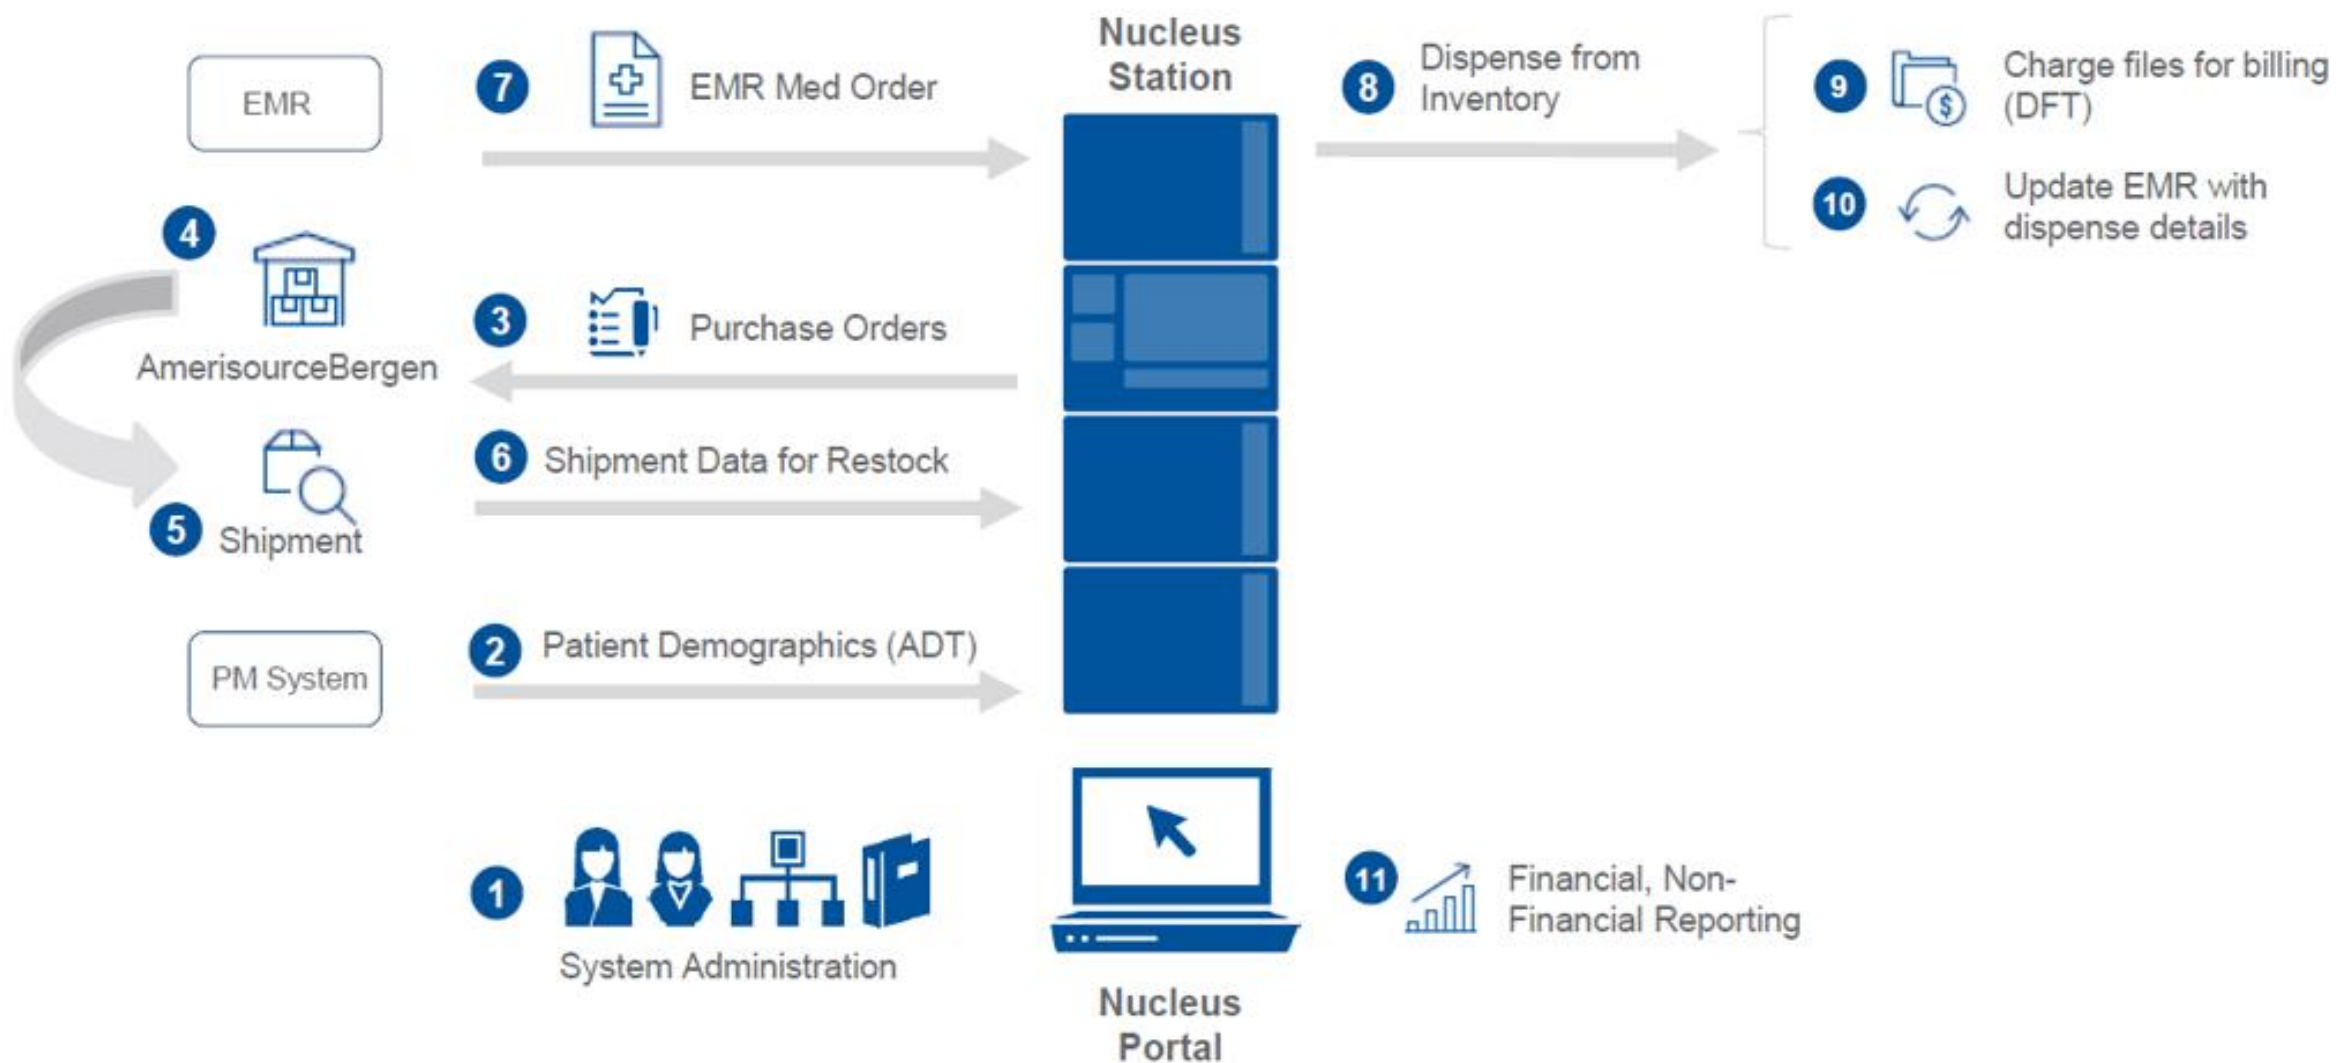

UAC with Auxiliary Unit

Treatment/Inventory Capabilities

Our applications and interfaces work together to provide efficient treatment and inventory management

Nucleus Cloud

Using software and data stored securely in “the cloud” is no longer a new thing; many enterprises have already adopted cloud-based technology solutions for greater resilience and convenience.

Nucleus continues to push the boundaries of what’s possible in inventory management with streamlined functionality, increased security, broader integrated ordering, and enhanced witness workflow, while adding the effortless maintenance benefits of a cloud-based system.

This latest iteration of Nucleus brings your practice’s ultimate inventory management wish list to life, with the same great Oncology Supply service.

Nucleus Inventory Management

Key Nucleus Features

Lot Number Tracking

- Lot Number Tracking enhancements include the ability to have multiple lot numbers and expirations date for each NDC assigned.

Barcode Scanning

- Now implementing wireless barcode scanners to track NDC, Lot Number and Expiration date for dispense, assignment and restock functionalities.

Witness

- Ability to set items for dual-user verification and blind counts.

Patient Owned Items

- Create patient-specific items that link to single patients. These new Patient Owned Items (PATOI) will only appear for use when that patient is selected for dispense.

Demand Order Enhancements

- Development team has been working on increased matching performance for the Demand Order report. This report will help forecast inventory needs in advance per OncoEMR's patient schedule.

'Bin Group' Enhancements

- Ability to customize the equivalent NDCs grouped in 'Bins' and order only what is set to the Bin Group.

Audit Enhancements

- New functionality includes selecting 'today's used items', patient-specific item filtering, and expiring medication filtering.

Nucleus Inventory Management

Barcode Scanning

Barcode Scanning functionality

New Updates

- Promote further accuracy of NDC, Lot Number and Expiration Date tracking within Nucleus Cloud.
- Currently built into Dispense, Restock and Assignment functionalities. (Dispense functionality shown below)
- Available to install at any Nucleus station.

Nucleus Inventory Management

Innovative Reports

Cost Analysis

- Provides a total cost of Nucleus Inventory Restocks and Dispenses along with the average cost per Dispensing Day. Displays a Potential Savings calculated from total Days in Stock.

Inventory Turnover Analysis

- Provides a total cost of Nucleus Inventory Restocks and Dispenses along with the average cost per Dispensing Day. Displays a Potential Savings calculated from total Days in Stock.

Audit Summary

- Displays the total number of items audited in a date range along with total amount of changed quantities.

Nucleus Impact Analysis Summary

- Provides key financial, usage, and inventory data points for the following reports with Best Practices comparison. Includes Shrinkage, Cost Analysis, Inventory Analysis and Unused Product levels.

Shrinkage Summary

- Summary of actual inventory against projected inventory to show inventory loss.

Unused 60 Day Report

- Displays products that have not been dispensed in the last 60+ days. Shows total inactive days and related costs.

Unused Transferrable Products Report

- Compares items assigned in Nucleus with quantity on hand that have not been dispensed in 60+ days with active product usage from other stations within your practice.

Usage Report

- Lists product usage for a selected period, grouped by clinic, then station. Displays current QOH, Unit Cost, Total Cost, and Total Usage and Minimum/Maximum usage over the selected time period.

Product Expiration Report

- Provides a list of medications with upcoming expiration dates and the respective quantities.

Report Examples

Nucleus Impact Analysis Report

The **Nucleus Impact Analysis Summary** report gives key financial, usage, and inventory data points for the following reports with Best Practices comparison. This report should be set as a scheduled report for monthly review.

Best Practices:

- Days on Hand – 3 to 5 Days
- Turnover – 4 Times per Month
- Unused – <10% Total Inventory

Test Hematology Oncology Clinic	
123456ST1	
Inventory Turnover	
Recommended Best Practice	4 Times per Month
Average Inventory Turnover	4.5 Times per Month
Average Inventory Cost	\$108,757.26
Cost of Goods Sold	\$489,543.20
Cost Analysis	
Recommended Best Practice	3 - 5 Days on Hand
Average Days on Hand	4.4
Current Inventory Cost	\$98,127.47
Cost per Dispense Day	\$22,251.96
Savings at 5 Days on Hand	-\$13,132.34
Savings at 3 Days on Hand	\$31,371.58
Unused Products- 60 Days or Older	
Recommended Best Practice	10% Unused
Unused Percentage	7.26 %
Unused Product Value	\$7,126.53
Inventory Shrinkage	
Recommended Best Practice	\$0.00 Shrinkage
Shrinkage	\$0.00

Nucleus Demand Order Report

Just-In-Time Ordering

The Demand Order report compares orders from OncoEMR with quantity on hand to provide recommendations for inventory to purchase.

- Demand Order follows your established rules via SDV/MDV configuration and makes appropriate purchase recommendations
- Your inventory carrying costs are reduced to the lowest possible level by purchasing only what you need during a specific time period
- Dose changes and 'add-ons' are accounted for by reporting one day more than your target inventory level
- Patient 'no shoes' are used by the next scheduled patient prescribed with the same product
- Matches inventory between OncoEMR and Nucleus' formulary via JCode and GCN

Durvalumab (Imfinzi)		J9173	77349	700	mg	1			
Nucleus Product Name		Nucleus JCode	GCN	ItemID	QOH	Pending PO	Pending Annex	Total Expected	Order suggestion
